

Kartik Ramachandrula

Transcript of Advanced Coursework

Below are the listings and descriptions of my advanced course undertakings and certifications as a High School student.

Mathematics

Marquette University

- A **MATH 4210**, *Complex Variables*, Spring 2024, Rebecca Sanders
Undergraduate introduction to Complex Analysis. Complex numbers, analytic functions, differentiation, series expansion, line integrals, singularities and residues.
Textbook: Brown and Churchill, *Complex Variables and Applications*.
- A **MATH 4200**, *Intermediate Analysis*, Fall 2023, Rebecca Sanders
Undergraduate introduction to Real Analysis. Limits and continuity, differentiability, Riemann integration. Topology of N-dimensional spaces.
Textbook: Kenneth Ross, *Elementary Analysis: The Theory of Calculus*.
- A **MATH 4121**, *Abstract Algebra II*, Spring 2024, Wim Ruitenburg
Continuation of MATH 4120 with emphasis on groups, rings, fields and modules.
Textbook: Judson, *Abstract Algebra: Theory and Applications*, chapters 16-23.
- A **MATH 4120**, *Abstract Algebra I*, Fall 2023, Wim Ruitenburg
Sets, mappings, operations on sets, relations and partitions. A postulational approach to algebraic systems including semigroups, groups, rings and fields. Homomorphisms of groups and rings, number systems, polynomial rings.
Textbook: Judson, *Abstract Algebra: Theory and Applications.*, chapters 1-6, 9-15
- P **MATH 3977**, *Problem Solving: Putnam Competition*, Fall 2022, Wim Ruitenburg
Studies mathematical problems, examine their solutions and formulate general problem solving methods and techniques. Prepares students for the Putnam Mathematical Competition.
- A **MATH 2451**, *Differential Equations*, Fall 2022, Tyler Gillen
Methods and techniques applicable to first order, nth order, and systems of first order differential equations. Eigenvalues, eigenvectors, the Wronskian, Laplace transforms, linearization and phase portraits.
Textbook: James Brannan, *Differential Equations: An Introduction to Modern Methods and Applications*.
- A **MATH 2350**, *Foundations of Mathematics*, Fall 2022, Rebecca Sanders
Undergraduate proof-based course in Discrete Math including set theory, logic, mathematical induction, graph theory, modular arithmetic, and higher mathematical thinking through proof and applications.
Textbook: Ensley and Crawley, *Discrete Mathematics: Mathematical Reasoning and Proof with Puzzles, Patterns, and Games*.

Milwaukee School of Engineering

A+ **MTH 2340**, *Linear Algebra with Applications*, Summer 2022, Chunping Xie

Undergraduate introduction to Linear Algebra. Topics include systems of linear equations, matrix equations, linear transformations, invertibility, subspaces and bases, the determinant, eigenvectors, the inner product, orthogonality, projection, matrix factorizations, and selected applications.

Textbook: Lay, Lay, Macdonald; *Linear Algebra and Its Applications*.

University of Wisconsin Oshkosh

A+ **MATH 273**, *Calculus III*, Spring 2022, Heather Minton

Undergraduate introduction to Multivariable Calculus and Vector Analysis. Vectors in two and three dimensions, dot and cross products, lines, and planes. Vector functions and their differentiation and integration. Multivariate differential and integral calculus, partial derivatives and their applications, gradients, and multiple integrals. Line and surface integrals, fundamental theorem of line integrals, Green's theorem, and Stokes' theorem.

Textbook: James Stewart, *Calculus: Early Transcendentals*, chapters 12-17.

Brookfield Central High School

A+ **AP**, *Calculus BC*, Fall 2020

5 Introductory calculus course ~ to calculus I, II.

Textbook: James Stewart, *Calculus: Early Transcendentals*, chapters 1-11.

A **AP**, *Statistics*, Spring 2023

5 Introductory statistics course.

Textbook: Yates, Moore, Starnes; *The Practice of Statistics*.

— Physics

Marquette University

- A **PHYS 3100**, *Classical Mechanics*, Fall 2023, Bill Hirsch
Three-dimensional motion of a particle in both Cartesian and spherical coordinate systems. Newtonian dynamics, central forces. Lagrange's and Hamilton's formulations of analytical mechanics, angular momentum, Kepler's problem and the dynamics of a rigid body.
Textbook: Douglas Cline, *Variational Principles in Classical Mechanics*.

University of Wisconsin Milwaukee

- A **PHYSICS 309**, *Modern Physics*, Spring 2023, Abbas Ourmazd
Elementary quantum physics, atomic and molecular physics, solid state and nuclear physics.
Textbook: Kenneth S. Krane, *Modern Physics*.

Brookfield Central High School

- A+ **AP**, *Physics C: Mechanics, Electricity & Magnetism*, Fall 2022
5 Introductory calculus-based treatment of undergraduate mechanics and electricity with lab.
A+ **AP**, *Physics I*, Fall 2021
5 Introductory algebra-based treatment of undergraduate mechanics with lab.

Certifications

University of Michigan, *Introduction to Thermodynamics*, Spring 2022

See Coursera certificate at <https://coursera.org/share/65a24ba546be48bcd4f312d65830c5c2>.

Rice University, *Introduction to Electricity and Magnetism Specialization*, Winter 2021-2022

Coursera specialization containing courses Physics 102: Electric Charges and Fields, Electric Potential and DC Circuits, Magnetic Fields and Faraday's Law, AC Circuits and Maxwell's Equations.

Certificate at <https://coursera.org/share/dc0a7ece6cbaf497a2b344840914b512>.

Computer Science

Marquette University

A **COSC 3100**, *Algorithms*, Fall 2023, Sheikh Iqbal Ahamed

Types of algorithms such as divide-and-conquer, greedy, probabilistic, graph traversal, heuristic and parallel algorithms. Computational complexity including time and space complexity, and the P=NP problem.

Textbook: Tim Roughgarden, *Algorithms Illuminated: Omnibus Edition*.

A **COSC 2100**, *Data Structures*, Fall 2022, Niharika Jain

Introduction to algorithm analysis and complexity theory presented in the context of data structures and the algorithms used to manipulate them. Includes traditional abstract data types, such as lists, stacks, queues and trees; as well as concepts of indexing, hashing and time/space complexity.

Textbook: Dale, Joyce, Weems, *Object-Oriented Data Structures Using Java*.

Brookfield Central High School

A+ **AP**, *Computer Science A*, Fall 2022

5 Introductory course in programming and Java.

Certifications

NVIDIA, Brown University, *Deep Learning for Science and Engineering*, Spring 2024

NVIDIA co-developed this course with Professor George Karniadakis and his team at Brown University.

Kaggle, *Courses in Machine Learning*, Spring 2024

Intro to Machine Learning, Intro to Deep Learning, Intermediate Machine Learning, Time Series.

Stanford, *Machine Learning*, Summer 2022

See Coursera certificate at <https://coursera.org/share/e78c90fdaecd52ea8e40fb380ae68c0e>.

Duke University, *Java Programming: Solving Problems with Software*, Summer 2021

See Coursera certificate at <https://coursera.org/share/9b295df7b2036f9fc084bd82720a5af3>.

IBM, *Introduction to Data Analytics*, Winter 2020-2021

See Coursera certificate at <https://coursera.org/share/3c3dec50c6d5d1a1fcbdc9cf5928317c>.

— Language Courses

University of Minnesota Twin Cities

A **LAT 3003**, *Intermediate Latin Prose*, Fall 2023, Daniel Tess

Building from a basic knowledge of Latin grammar and syntax, this course aims to develop students' fluency with Latin prose and to introduce some stylistic elements of hallmark authors of the Republican period. The primary author for the course is Cicero and/or Caesar. In addition to providing an opportunity to read sustained prose, these texts also introduce some fundamental principles of Roman rhetoric, the science of constructing language around the goal of persuasion.

Sanskrita Bharati USA

A **SAMS 203, 301, 302**, *Advanced Sanskritam*, 2023-24

Reading and analyzing simple stanzas in verse, and learn to compose essays in Sanskritam. Students will also learn the present continuous participles and euphonic consonant combinations in depth. In addition, students will use the necessary skills to read simple poetry.

A **SAMS 103, 201, 202**, *Intermediate Sanskritam*, 2022-23

Students improve their vocabulary and gain fluency in speaking, reading and writing. Grammatical topics covered in this level include the seven case endings, present, past and future tenses, the passive voice and the subjunctive mood.

Other Courses

A+ **AP**, *English Language and Composition*, Spring 2024

-

A **AP**, *Biology*, Fall 2023

-

A **AP**, *Chemistry*, Fall 2022

5

A **AP**, *Macroeconomics*, Spring 2022

5
